05.00	In our solar system, there are eight recognized planets. These are, in order of their distance from the Sun: 1. Mercury 2. Venus 3. Earth 4. Mars 5. Jupiter 6. Saturn 7. Uranus 8. Neptune Pluto used to be classified as the ninth planet, but in 2006, the International Astronomical Union (IAU) redefined the criteria for planetary status, and Pluto was reclassified as a "dwarf planet." There are many other planetary bodies outside our solar system, known as exoplanets, but these are the primary planets within our own solar system.
02.95	As of current astronomical understanding, there are eight recognized planets in our Solar System. These planets, in order of their distance from the Sun, are: 1. Mercury 2. Venus 3. Earth 4. Mars 5. Jupiter 6. Saturn 7. Uranus 8. Neptune In addition to these eight, there are also numerous dwarf planets, such as Pluto, Eris, Haumea, Makemake, and Ceres, among others. The number of known planets outside our Solar System, called exoplanets, is continually increasing as astronomical methods and technologies advance, with thousands having been discovered in various star systems.
03.38	As of our current astronomical knowledge, there are eight recognized planets in our Solar System. These are, in order from the Sun: 1. **Mercury** 2. **Venus** 3. **Earth** 4. **Mars** 5. **Jupiter** 6. **Saturn** 7. **Uranus** 8. **Neptune** Pluto was originally classified as the ninth planet but was reclassified as a "dwarf planet" by the International Astronomical Union (IAU) in 2006. In addition to our Solar System, many exoplanets (planets outside our Solar System) have been discovered orbiting other stars. As of now, thousands of such exoplanets have been detected, and the number continues to grow as detection methods improve.
01.78	In our Solar System, there are eight recognized planets. They are, in order of their distance from the Sun: 1. Mercury 2. Venus 3. Earth 4. Mars 5. Jupiter 6. Saturn 7. Uranus 8. Neptune It's worth noting that Pluto was considered the ninth planet until 2006, when the International Astronomical Union (IAU) reclassified it as a "dwarf planet."
03.27	As of my last update, there are eight recognized planets in our Solar System. These planets, in order from the Sun, are: 1. Mercury 2. Venus 3. Earth 4. Mars 5. Jupiter 6. Saturn 7. Uranus 8. Neptune Pluto, which used to be considered the ninth planet, was reclassified as a "dwarf planet" by the International Astronomical Union (IAU) in 2006. There are also many other dwarf planets and numerous moons, asteroids, and comets in our Solar System. In addition, astronomers have discovered thousands of exoplanets—planets that orbit stars outside our Solar System.
02.06	As of my most recent update in October 2023, there are eight planets in our Solar System. These are, in order from the sun: 1. **Mercury** 2. **Venus** 3. **Earth** 4. **Mars** 5. **Jupiter** 6. **Saturn** 7. **Uranus** 8. **Neptune** Pluto, which was once considered the ninth planet, was reclassified as a "dwarf planet" by the International Astronomical Union (IAU) in 2006.
03.26	In our Solar System, there are eight recognized planets. In order of their distance from the Sun, they are: 1. Mercury 2. Venus 3. Earth 4. Mars 5. Jupiter 6. Saturn 7. Uranus 8. Neptune In addition to these eight planets, there are also dwarf planets, the most famous being Pluto, which was reclassified from a planet to a dwarf planet in 2006 by the International Astronomical Union (IAU). There are several other recognized dwarf planets, including Eris, Haumea, Makemake, and Ceres. Beyond our Solar System, astronomers have discovered thousands of exoplanets (planets that orbit stars outside our Solar System), but the number of such exoplanets is continually increasing as new discoveries are made with advanced telescopes and space missions.
04.47	As of my last update in October 2021, our Solar System consists of eight recognized planets. These are: 1. **Mercury** 2. **Venus** 3. **Earth** 4. **Mars** 5. **Jupiter** 6. **Saturn** 7. **Uranus** 8. **Neptune** Pluto was historically considered the ninth planet, but it was reclassified as a "dwarf planet" by the International Astronomical Union (IAU) in 2006. Beyond our Solar System, there are thousands of exoplanets (planets that orbit stars other than the Sun) that have been discovered, with many more likely yet to be found. The count of these exoplanets continues to grow as astronomers develop more advanced methods to detect them.

03.69	As of my last update in October 2023, there are eight recognized planets in our Solar System. These are, in order of their distance from the Sun: 1. Mercury 2. Venus 3. Earth 4. Mars 5. Jupiter 6. Saturn 7. Uranus 8. Neptune Pluto was originally classified as the ninth planet, but in 2006, the International Astronomical Union (IAU) redefined the criteria for planethood, and Pluto was reclassified as a "dwarf planet." In addition to Pluto, there are several other recognized dwarf planets, such as Eris, Haumea, and Makemake. If you are inquiring about potential planets in other star systems, known as exoplanets, thousands have been discovered, and research is ongoing to find and study more of them.
03.59	As of my knowledge cutoff date in October 2021, there are eight officially recognized planets in our Solar System. These are, in order from closest to the Sun to farthest: 1. Mercury 2. Venus 3. Earth 4. Mars 5. Jupiter 6. Saturn 7. Uranus 8. Neptune Pluto was once classified as the ninth planet, but it was reclassified as a "dwarf planet" by the International Astronomical Union (IAU) in 2006. There are also other dwarf planets in our Solar System, such as Eris, Haumea, and Makemake. If you are referring to exoplanets, which are planets that orbit stars outside our Solar System, thousands of such planets have been discovered to date, and the number continues to grow as astronomical techniques improve and more observations are made.

04.28	As of the latest updates, there are eight planets in our solar system. These are, in order from closest to the sun: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. Pluto, which was once considered the ninth planet, was reclassified as a dwarf planet by the International Astronomical Union in 2006. The count of planets can vary if considering exoplanets, which are planets orbiting stars other than our Sun. Thousands of exoplanets have been discovered in various star systems across the galaxy.
06.59	As of the last update in 2023, there are eight officially recognized planets in our Solar System. These are, in order from closest to the Sun: 1. Mercury 2. Venus 3. Earth 4. Mars 5. Jupiter 6. Saturn 7. Uranus 8. Neptune Pluto was once considered the ninth planet, but it was reclassified as a "dwarf planet" by the International Astronomical Union in 2006. Beyond our Solar System, astronomers have discovered thousands of exoplanets orbiting other stars.
03.04	As of the last update in 2023, there are eight recognized planets in our solar system. These are, in order from closest to farthest from the Sun: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. This list reflects the current consensus since Pluto was reclassified as a "dwarf planet" by the International Astronomical Union (IAU) in 2006.
05.23	As of my last update, there are eight recognized planets in our solar system: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. Pluto, once considered the ninth planet, was reclassified as a dwarf planet by the International Astronomical Union in 2006. Additionally, there are thousands of exoplanets (planets outside our solar system) that have been discovered orbiting other stars.
04.09	As of the latest available information, there are eight recognized planets in the Solar System. In order of their distance from the Sun, these planets are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. This count follows the International Astronomical Union's definition and reclassification in 2006, wherein Pluto was reclassified from a planet to a "dwarf planet."
04.89	As of the latest understanding, there are eight recognized planets in our solar system: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. This classification follows the 2006 International Astronomical Union (IAU) definition, which reclassified Pluto as a "dwarf planet." This change reduced the number of accepted major planets in our solar system from nine to eight. Outside our solar system, there are thousands of planets discovered orbiting other stars, known as exoplanets.
05.53	As of my last update, there are 8 planets in our solar system. These are, in order from the Sun: 1. Mercury 2. Venus 3. Earth 4. Mars 5. Jupiter 6. Saturn 7. Uranus 8. Neptune Pluto was considered the ninth planet until 2006 when it was reclassified as a "dwarf planet" by the International Astronomical Union.
03.57	As of the latest information available to me, there are eight planets in our Solar System: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. This classification followed the demotion of Pluto to a "dwarf planet" by the International Astronomical Union in 2006.

04.17	As of my last update in 2023, there are eight planets in our solar system: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. This count is based on the definition of a planet set by the International Astronomical Union (IAU) in 2006, which led to the reclassification of Pluto as a dwarf planet. Beyond our solar system, there are thousands of confirmed exoplanets orbiting other stars, and this number continues to grow with ongoing research and discoveries.
03.41	As of the most recent data available up to 2023, there are eight known planets in the Solar System: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. Pluto, which was once classified as the ninth planet, was reclassified as a dwarf planet by the International Astronomical Union (IAU) in 2006. Beyond our Solar System, thousands of exoplanets (planets orbiting other stars) have been discovered, with new additions frequently being identified through various space missions and observations.

02.32	As of current astronomical consensus, there are eight planets in our solar system. These are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.
01.05	There are 8 planets in our solar system.
01.19	In our solar system, there are 8 recognized planets.
00.96	There are 8 planets in our solar system.
04.09	As of the current understanding, there are eight recognized planets in our solar system: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. However, there are potentially thousands of planets beyond our solar system in the wider Milky Way galaxy.
04.37	As of the latest count, there are eight recognized planets in our solar system: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. However, there are thousands of planets, known as exoplanets, found outside our solar system.
01.19	There are 8 planets in our solar system.
03.73	As of the current understanding and definition of a planet, there are 8 planets in our solar system. These include Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. However, there are thousands of other planets discovered outside of our solar system, in the galaxy.
01.37	There are 8 planets in our solar system.
01.07	There are 8 planets in our solar system.

01.05	There are eight planets in our solar system: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.
00.99	There are eight confirmed planets in our solar system: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.
01.16	There are eight planets in our solar system: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.
00.93	There are eight planets in our solar system: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.
02.95	There are eight planets in our solar system: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.
00.96	There are eight planets in our solar system: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.
01.03	There are currently eight officially recognized planets in our solar system: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.
01.20	There are 8 planets in our solar system: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.
01.13	There are 8 officially recognized planets in our solar system, including Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.
01.12	As of September 2021, there are eight recognized planets in our solar system: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.
